Q Acoustic M3 Price: 299 £ (about 2600 kr.)

A sound of another world when you watch movies

I love watching movies. After a long day at the office, there is nothing better than to lie on the couch with a good movie on my 55" television. I have a beautiful Samsung TV where the picture is fantastic. The sound is also good, but the sound experience does not make the picture justice. I miss that sound come alive and that I can feel what I see.

The last time I tried Q Acoustic M3. It is the little brother to the M4, which in 2015 was notifying darling and reaped many awards for best soundbar in the cheaper category. M3'eren is a cheaper model than the M4.

I think M3 provides an amazing audio experience. I've seen a few movies with this soundbar, but I tested it with Lord of the Rings, The Two Towers. There's a really good sound depth and you can sense when an arrow whiz in the air, or when an ax is swung. Additionally, you can feel the explosion when Helms Deeps wall burst apart. Soundbar provides brand through a cinema feeling when watching movies at home. The sound is eminent and the image on the screen comes alive.

Additionally you can connect the soundbar via an HDMI cable, which makes it incredibly easy to set it up. In addition, I do not need to use the supplied remote control when I can just use my Samsung remote. Soundbar turned on simultaneously with the television on and off also at the same time.

Furthermore, you can connect Bluetooth devices to it. It is super, since I also use it to listen to music in the living room, for playing music from spotify. Should I forget to turn off the sound bar when the music is off, then turns off automatically.

LED light around the power button lights up with different colors depending on the input used. Purple for HDMI, white Optical, blue for Bluetooth, and green for the line in.

I think the design is very beautiful. It is stylish, discreet and the size is perfect. I do not have much of a soundbar that take up too much on the wall and I am happy for this because it is compact. Furthermore, the addition of a foot, but may also be coupled very easily to the wall.
